

**A METHOD OF DIAGNOSIS AND TREATMENT
AND AGENTS USEFUL FOR SAME**

ABSTRACT

The present invention relates generally to a method for detecting an aberrant cell, and more particularly an aberrant epithelial cell, in a subject or in a biological sample from said subject and agents useful for same. More particularly, the present invention relates to a method of deleting an aberrant mammary epithelial cell. The presence of the aberrant cell or group of aberrant cells provides an indication of a particular disease or condition or a propensity for development of a disease or condition.
